Anyone profiting in the Stock Market would not waste their time trying to get more money from other people, only losers try. Successful stock trading is just too much fun!

Old Temecula 2024

TheGame gives focus and suggests the better Stock/ETF's to Buy and "when" but you will make the final decision. Blue & Green Box indicators rarely lose any profit.

It is best to Hold your bet till you make 5% or More but no more than 5-days! This avoids getting sucked under! Sell just before the Market close and when the Day indicates Risky or even Too Hot, column 5 will be brick red! Consider my research as that second opinion. Do not Buy any "Long" positions if Column 5 is brick red.

The Game 2024

by Old Temecula

Success in stock trading comes from understanding the daily Market Mood and taking advantage of it. I share real data not strategies as you will develop your own. Drawing lines on old school stock charts today in this age of intelligent computing is just clueless guessing!

In the open field from column-6 to right column-12 the light blue cells are days that opened higher than the previous days open. The peacock blue cells opened higher 3-days in a row, a possible trend? Bold numbers above average volume!

Cell values with the underlined profit, are a mid-day higher price than the previous mid-day price, similar to the Heikin-Ashi formula or value.

Obvious should be the dull cells that are Stock/ETF's to avoid right now.

** The Game is not "The Guardian", you must learn to let go! **
